

Higher Education Partnership – India Programme
Center of Excellence in Big Data Engineering
International Institute of Information Technology – Bangalore

Initiation Report

Notification of acceptance of our project proposal entitled “Co-creation of a Center of Excellence in Big Data Engineering” was received on 14 March 2016.

In response to the above, a process of initiation of this project has been started. A first-level meeting between the Indian and UK co-applicants along with our industry partner has been planned in early April.

A couple of existing courses have been identified by the co-applicant institutions to be remodelled from a Big Data Engineering perspective, with industrial applications.

A separate meeting has been scheduled in the week starting 28th March comprising the different laboratories under the Center for Data Sciences (CDS) at IIIT Bangalore. The objective of this meeting is to collect inputs and perspectives for creating a talent pool of research in Big Data Engineering.
